KANAKA PAC · PUBLIC SITE · 15 OCTOBER 2026

Accessibility Scorecard

An automated WCAG 2.1 AA audit of all eight public pages, run with Lighthouse 12 and axe-core in headless Chrome.

94.8/100

Mean Lighthouse accessibility score across eight public pages

162
Individual checks passed

2
Distinct rules failing

93–96
Score range, lowest to highest page

0
Failures in images, forms, links or ARIA

Every public page

Scores sit in a three-point band, so the two findings below are shared components rather than page-specific problems. Checks marked not applicable have no matching element on the page.

Lighthouse accessibility category, one run per route

ROUTE	SCORE	PASSED	FAILED	NOT APPLICABLE
/	**96**	21	1	41
/events	**96**	21	1	41
/contact	**96**	21	1	41
/about	**95**	20	1	42
/minutes	**94**	20	2	41
/announcements	**94**	20	2	41
/articles	**94**	20	2	41
/policies	**93**	19	2	42

/policies				
Mean / total	**94.8**	**162**	**12**	—

What is failing

Both findings live in two shared components, so three small edits clear every page.

color-contrast SERIOUS

WCAG 1.4.3 Contrast (Minimum), Level AA · all 8 pages

Two pieces of small grey text fall below the 4.5:1 minimum for body-size type.

Footer admin link	`Footer.tsx:68` — **3.03:1**, grey `#6b7280` on `#1f2937` at 12px. Needs `text-gray-400` or lighter.
Subscribe form caption	`SubscribeForm.tsx` — **4.44:1**, grey `#6b7280` on `#eff6ff` at 12px. One step to `text-gray-600` clears it.

heading-order MODERATE

Relates to WCAG 1.3.1 Info and Relationships · 4 listing pages

Listing pages jump from `h1` straight to `h3`, so screen-reader users navigating by heading hear a level that was never opened.

Cause	`EventCard`, `MinutesCard`, `AnnouncementCard` and `SubscribeForm` all title themselves with `h3` while the page heading is `h1`.
Fix	Promote those card titles to `h2`. Visual size is set by Tailwind classes, so nothing changes on screen.

What passed cleanly

Named axe-core rules with zero violations across every page audited.

- ✓ Form elements have labels
- ✓ Links have discernible names
- ✓ Buttons have accessible names
- ✓ Images have alt text
- ✓ Document has a title
- ✓ Page declares a language
- ✓ ARIA roles are valid
- ✓ ARIA attributes match roles
- ✓ Required ARIA attributes present
- ✓ Touch targets large enough
- ✓ Zoom is not disabled
- ✓ Lists are correctly structured

> SAFE TO SAY ON STAGE
>
> “Every public page scores 93 or better on Lighthouse accessibility, averaging 94.8. Across 162 automated WCAG 2.1 AA checks, only two rules fail, and both are small contrast and heading-level fixes in shared components.”
>
> Fix the three edits above and this becomes a clean 100 on all eight pages.

What this number does not cover

- **Automated testing catches roughly a third of WCAG criteria.** A 100 means no detectable violations, not a guarantee of usability.
- **Keyboard and focus behaviour was not scored.** Lighthouse lists focus traps, tab order and interactive affordance as manual checks only.
- **Content lists were empty during the run.** The local database was offline, so cards rendered as empty states. The heading-order finding still holds, because the card components use `h3` regardless of data.
- **Admin pages were not audited.** The eight public routes only.
